

Leaflet 27 FIRST AID AT WORK

AMENDMENT RECORD

Amd	Date	Text Affected	Authority
1	March 2010	Section 2 – Responsibility for first aid provision to Service Personnel on Service Units delegated to Commanding Officers	SGD-Strat Pol-OM Civ
1	March 2010	Section 4 – Paragraph 4.2.1 re-worded for clarification	SGD-Strat Pol-OM Civ
2	April 2010	Annex A – Risk Assessment table updated	SGD-Strat Pol-OM Civ
2	April 2010	Annex A – New Risk Assessment Flow Chart added and guidance box covering Emergency First Aiders	SGD-Strat Pol-OM Civ
3	February 2012	Guidance box added at 7.4 Re using 221 to contact emergency services when travelling or working in remote locations	DSEA-CPA-Policy
4	February 2012	Forward amended to reflect the change of authority from the OHSEB to the Director of DSEA	DSEA- CPA Policy

REVISION NOTE:

Leaflet was revised to include advice on legal liability and claims management for MOD civilian First Aiders, include information to be contained on notices for locations of first aid facilities within buildings and operation of defibrillators.

HISTORICAL RECORD:

The original leaflet was introduced in April 2003.

Reviewed: April 2010, Feb 2012

This policy has been equality and diversity impact assessed in accordance with Departmental policy. This resulted in a Part 1 screening only completed (no direct discrimination or adverse impact identified) This policy is due for review in Feb 2013

FOREWORD

This JSP 375 leaflet is published under the authority of the Director of the Defence Safety & Environment Authority (DSEA) following consultation with departmental stakeholders and is to be applied across all areas of MOD and the Armed Forces to ensure compliance with UK and host nation legislation/standards and/or MOD policy.

1. SCOPE

1.1 This leaflet advises line managers of the statutory duties on MOD required by the Health and Safety (First Aid) Regulations (known as First at Work Regulations – FAWR), and the way these regulations are to be implemented in MOD. The Regulations are backed by an Approved Code of Practice (ACOP L74). The Regulations do not apply to the Armed Forces of the Crown or to any Force to which the provision of the Visiting Forces Act applies. However, in compliance with the Secretary of State's Policy Statement on Safety, Health, Environmental Protection and Sustainable Development, standards and management arrangements are to be put in place which are, so far as is reasonably practicable, at least as good. Therefore, Service personnel are covered by similar arrangements (see paragraph 2.3).

February 2012 Leaflet 27 Amd 3 Page 3 of 21

2. INTRODUCTION

- 2.1 First Aid at Work covers the arrangements Commanding Officers and Heads of Establishments (CO/HoE) must make to ensure staff who become ill or injure themselves at work receive immediate attention, including calling an ambulance in serious cases. It doesn't matter whether the illness or injury is caused by work, what is important is that lives can be saved and minor injuries prevented from becoming serious by the quick intervention of a trained First Aider.
- 2.2 The requirement to provide first aid to civilian staff is delegated to CO/HoEs along with the duty to supply the necessary training and equipment needed to meet these Regulations. This will require:
 - Trained and certificated volunteers from the workforce, to act as First Aiders.
 - Provision of First Aid Boxes and first aid equipment.
 - Provision, where necessary, of an equipped First Aid Room.
 - Maintenance of any equipment provided.
- 2.3 The responsibility to provide first aid to Service personnel in Service Units is delegated to Commanding Officers.

3. ASSESSMENT OF FIRST AID PROVISION

- 3.1 How much first aid provision a CO/HoE has to make depends on the circumstances in each workplace. No fixed level exists; CO/HoEs need to make a written assessment of what facilities and personnel are appropriate to the establishment. This should include an assessment of the possible need for defibrillators, see Section 6. A guide to help CO/HoEs assess the numbers of First Aiders required is at Annex A.
- 3.2 Not all line managers will be expected to assess the need for first aid provision as it is normally done on a "site" basis. However, whoever makes the decision will need to justify on what grounds the level of first aid provision has been set. A written recorded assessment in areas where more than 5 persons are employed will be required. It is especially important on multi-occupier sites that the first aid arrangements are agreed by all parties and are recorded in a written agreement.
- 3.3 In assessing need, CO/HoEs need to consider:
 - Workplace hazards and risks;
 - The size of the organisation;
 - The organisation's history of accidents;
 - The nature and distribution of the workforce;
 - The remoteness of the site from emergency medical services;
 - The needs of travelling, remote and lone workers:
 - Staff working on shared or multi-occupied sites;

February 2012 Leaflet 27 Amd 3 Page 4 of 21

- Annual leave and other absences of First Aiders and Appointed Persons;
- Visitors and members of the public.

4. TRAINING REQUIREMENTS AND PROVISION OF FIRST AID ROOMS

4.1 What is a First Aider?

- 4.1.1 A First Aider is someone who has passed a Health and Safety Executive (HSE) approved 4 day training course for carrying out first aid at work and holds a valid First Aid at Work Certificate. A First Aider can carry out the duties of an Appointed Person.
- 4.1.2 When CO/HoEs are assessing first aid needs, they are advised that qualified medical doctors registered with the General Medical Council (GMC), and nurses whose names are registered in Part 1, 2, 10 or 11 of the Single Professional Register maintained by the United Kingdom Central Council for Nursing, Midwifery and Health Visiting, are qualified to administer first aid. Where such doctors and nurses are employed by MOD, may be taken into account in determining first aid provision and in particular the need for appointing First Aiders.

4.2 "First Aider" Status of Service Personnel

4.2.1 All Service personnel undergo basic first aid training as part of their Common Core Skills, however, this is not sufficient for them to be classed as a First Aider under the FAWR. However, Service personnel whose core skills are in date and Combat Medical Technicians (CMTs) are allowed to administer first aid to civilians and act as an Appointed Person under the FAWR. Although CMTs are trained to a very high standard (considerably higher than what is required by FAWR) their qualifications are not recognised by the HSE under the FAWR, and so they cannot be counted in the assessment of First Aiders for work.

4.3 What is an Appointed Person?

- 4.3.1 An Appointed Person is someone who takes charge in an emergency situation when a person becomes ill at work, either by: finding a trained First Aider; calling an ambulance in an emergency situation; replenishing the First Aid Box when required; ensuring emergency equipment is working. An Appointed Person should only administer first aid appropriate to their level of training.
- 4.3.2 There is no legal requirement for an Appointed Person to have undergone a specific training course. However, it is recommended that they know some basic first aid and also the required contents of a First Aid Box as well as procedures for dealing with an emergency (including how to call an ambulance and the information that the Ambulance Service will require).

February 2012 Leaflet 27 Amd 3 Page 5 of 21

4.4 What Training is Required?

- 4.4.1 If you require a qualified First Aider, they need to attend an HSE approved course that has at least 24 hours of training, usually held over 4 days or spread out over a few weeks. First Aid at Work certificates are valid for 3 years. Re-qualification courses consist of 12 hours over 2 days provided the requalification training takes place while the previous certificate is still valid. Training courses are available for Appointed Persons and normally consist of 4 hours training.
- 4.4.2 Training for First Aiders is available from a multitude of sources, including St. John's Ambulance, British Red Cross Society and commercial providers. It is the responsibility of CO/HoEs to make their own training and retraining arrangements.
- 4.4.3 First Aiders have a responsibility to maintain their knowledge and skills at an adequate level. It has been shown that there is a significant skills fade after as little as 6 months if first aid is not regularly practised. First Aid coordinators may wish to arrange regular practice to assist in the maintenance of first aid knowledge and skills. This could be conducted in conjunction with fire evacuation exercises.

4.5 What should First Aid Rooms contain?

- 4.5.1 Where the assessment has identified the requirement for a First Aid Room or Rooms; suitable accommodation must be provided. This will be necessary in establishments with high risks, such as dockyards, remote air stations, and vehicle workshops or munitions stores and in larger premises at a distance from medical services. Responsibility for the room must be delegated to a designated person.
- 4.5.2 A First Aid Room(s) must contain essential first aid facilities and equipment; allow easy access to patients including by wheelchair or stretcher; be clearly signposted by a white cross pictogram or symbol on a green background (which may be supplemented with text), in accordance with the Health & Safety (Safety Signs & Signals) Regulations. If possible, the room(s) should be reserved exclusively for first aid treatment. However, they may also be used to provide a rest area for those who feel unwell, a private environment for new and expectant mothers, or for medical examinations, provided that they can be vacated quickly for dealing with a first aid incident.

5. PROTECTING THE FIRST AIDER FROM INFECTION

5.1 In any situation requiring first aid, there are certain standard hygiene precautions that are expected to be undertaken by First Aiders to reduce the risk of transmitting infection. The HSE advises that it is not normally necessary for First Aiders in the workplace to be immunised against blood-borne viruses (BBVs) such as Hepatitis B, unless the risk assessment indicates it is appropriate (see JSP 375 Vol 2 - Leaflet 31).

February 2012 Leaflet 27 Amd 3 Page 6 of 21

6. USE OF DEFIBRILLATORS

6.1 In the event of a cardiac arrest, although blood flow can be maintained and oxygenated with cardiac massage and mouth-to-mouth resuscitation, the only effective way to restore normal rhythm is to defibrillate the heart by attaching two large electrodes to the patient's chest and by delivering an electrical shock. The machine that provides this shock is called a defibrillator. These may be manual, semi-automatic or fully automatic. The fully Automatic External Defibrillator or AED is preferred.

Figure 1. Example of an Automated External Defibrillator

- 6.2 To have the greatest impact, defibrillators should be introduced where the risk of cardiac arrest is highest. The British Heart Foundation has suggested that to be cost effective, the probability of cardiac arrest occurring in the location should be at least once every two years.
- 6.3 At present in the UK there are no statutory requirements for the placement of defibrillators, or training and retraining for potential users of automated external defibrillators (AEDs). However, where AEDs are provided, TLB Holders and CO/HoEs must provide appropriate training for staff (including regular retraining) and maintenance of the equipment (both normally available from the manufacturer/supplier) and keep appropriate records for inspection.
- 6.4 Defibrillation by lay people, provided that they have been appropriately trained and are competent in the use AEDs, is considered safe and effective and is supported by the leading professional organisations. In view of the fact that current AEDs give clear instructions on their use and cannot administer a shock in the wrong circumstances, it is the view of the Resuscitation Council (UK) that the use of AEDs should not be restricted to trained personnel. They consider that it is inappropriate to display notices to the effect that only trained personnel should use the devices, or to restrict their use in other ways. Such restrictions are regarded as against the interests of victims of cardiac arrest, and discourage the greater use of AEDs by members of the public who may be able to preserve life and assist victims of cardiac arrest.

February 2012 Leaflet 27 Amd 3 Page 7 of 21 6.5 The above advice is applicable to fully automatic AEDs. Semi-Automatic and manual defibrillators must only be used by appropriately trained personnel. It is therefore essential that CO/HoEs ensure that defibrillators held on their sites suitably labelled according to type and suitability.

7. INFORMATION FOR STAFF

- 7.1 First aid arrangements operate efficiently in an emergency only where they are known, understood, and accepted by everyone in the workplace. One way to achieve this is to set up procedures for informing staff in consultation with staff or safety representatives, normally as part of the induction process. The procedures should detail first aid provision and explain how staff will be told the location of first aid equipment, facilities and personnel. The procedures should also identify who will provide relevant first aid information to new and transferred staff and to visitors and contractors.
- 7.2 A simple method of keeping staff informed is by displaying first aid location notices as shown by an example at Annex D. The information needs to be clear and easily understood by all staff. These notices should be locally produced and for a minimum must contain the following information:
 - Form should be A4
 - The background must be green
 - It must have the international recognised First Aid symbol; a white cross on a green background with 'first aid' below in white text
 - The location of the nearest First Aid Room (where provided) and the location of the keys together with a telephone contact number
 - List of all the personnel who are trained to give first aid with the following information
 - o Name
 - o Certificate Expiry Date
 - o Individuals location
 - Telephone Extension
 - Location of other first aid facilities, such as nearest First Aid Kit
 - Telephone number to call for an ambulance (commonly within the MOD this is 222 or 2222, however other numbers may still be used depending on establishment)
- 7.3 An example of an appropriate form is at Annex D (Note: This is an example only and contents may be altered subject to local site requirements).
- 7.4 TLB holders and CO/HoEs should ensure that those with reading and language difficulties are also kept informed. .

GUIDANCE

When travelling abroad, in the UK or working in a remote location, **112** can be dialed free of charge from any telephone or mobile phone to contact the emergency services (Ambulances, Fire & Rescue Service and the Police) in

February 2012 Leaflet 27 Amd 3 Page 8 of 21 the European Union (EU), as well as several other countries in the world. Using this number has an advantage especially when using a mobile phone as EU Directive E112 (a location-enhanced version of 112) requires mobile phone networks to provide emergency services with whatever information they have about the location a mobile call was made.

Even if you don't know exactly where you are, using **112** on your mobile phone will allow the system to pinpoint your precise location within about the first 30 seconds of your call to the telecom operator and the operator automatically transmits the location information to the emergency centre so they can get the appropriate help to you as quickly as possible.

The GSM mobile phone standard designates 112 as an emergency number, so it will work on GSM phones even in North America where GSM systems redirect emergency calls to 911, or Australia where emergency calls are redirected to 000 (although location information may not be automatically transmitted). 112 can be dialed on most GSM phones even if the phone is locked.

8. INDEMNITY COVER (INSURANCE)

- 8.1 First aid provision by the MOD, via trained staff, is primarily for the benefit of its staff in order to fulfil health and safety requirements. Any treatment of members of the public is incidental to the above and is not a primary responsibility of the MOD.
- 8.2 If you are a qualified First Aider with an in-date certificate, an Appointed Person and/or appropriately trained member of the Services with current Common Core Skills or a Military Medic and you provide first aid to a MOD member of staff (Service or civilian), a contractor employed on MOD business or members of the public entitled to be on MOD premises, MOD will indemnify you for your actions in providing first aid in accordance with the Regulations.
- 8.3 If you provide first aid (whether Service or civilian) to anyone outside the scope of MOD business, for example to someone you pass in the street, the MOD will not be liable for your actions or any of their consequences. You are, therefore, strongly recommended to obtain your own liability cover if you wish to use your skills and give first aid outside of MOD business. Some of the first aid training organisations can provide first aid indemnity insurance.

9. RECORD KEEPING

9.1 It is MOD policy that any work related incidents, injuries or cases of illness which have been treated are recorded and retained for a minimum of 40 years. How this information is locally recorded is dependent on local site practice, but all incidents must be recorded on the Incident Recording

February 2012 Leaflet 27 Amd 3 Page 9 of 21 Information System (IRIS) or similar system. If in doubt, guidance should be sort from the local health and safety advisor or senior member of staff.

- 9.2 In addition to retaining records of work related injuries or illness, sites that have defibrillators must also retain records relating to the purchase of the equipment and details of all staff trained (if the equipment is semi-automatic) to use the equipment (which must be updated regularly. It is also essential that details of the maintenance of the equipment are also retained.
- 9.3 Retaining this information can help identify accident trends and possible areas for improvement in the control of health and safety risks, it also provides for historic information of the event in case a common law claim is received.

11. DEFINITIONS

Appointed Person

Is someone who takes charge in an emergency situation when a person becomes ill at work, either by: finding a trained First Aider; calling an ambulance in an emergency situation; replenishing the First Aid Box when required;

February 2012 Leaflet 27 Amd 3 Page 10 of 21 ensuring emergency equipment is working. An Appointed Person should only administer first aid

appropriate to their level of training

Automated External Defibrillator (AED)

A device used to correct a dangerously abnormal heart rhythm, usually ventricular fibrillation, or to restart the heart by depolarizing its electrical conduction system and delivering brief measured electrical shocks to the chest wall or the heart

muscle itself.

Competence requires sufficient practical Competence experience and technical knowledge and

understanding to carry work in a safe and efficient manner to a recognized standard on a regular basis. It requires the ability to communicate understanding to all people in a clear and comprehensible manner, and the awareness of

personal limitations

Common Core Skills These are the basic military skills that include

> weapons handling, map reading, military customs and courtesies, operations in field conditions, first

aid and combat survival.

First Aider A First Aider is someone who has passed a valid

> 4 day Health and Safety Executive (HSE) approved training course for carrying out first aid at work and holds a valid First Aid at Work Certificate. A First Aider can carry out the duties

of an Appointed Person

Emergency First Aid at

Work (EFAW)

An EFAW is someone who has received basic first at work training to enable to give emergency first aid to someone who is injured or becomes ill at work. MOD does not recommend EFAW, all first aiders should be trained to full first aid levels

Military Medic Trained military personnel who are responsible for

> providing first aid and frontline trauma care on the battlefield. They are also responsible for providing continuing medical care in the absence of a readily available physician, including care for

disease and non battle injury

Leaflet 27

First Aid At Work Risk Assessment

1. How Many First Aiders do you need to provide?

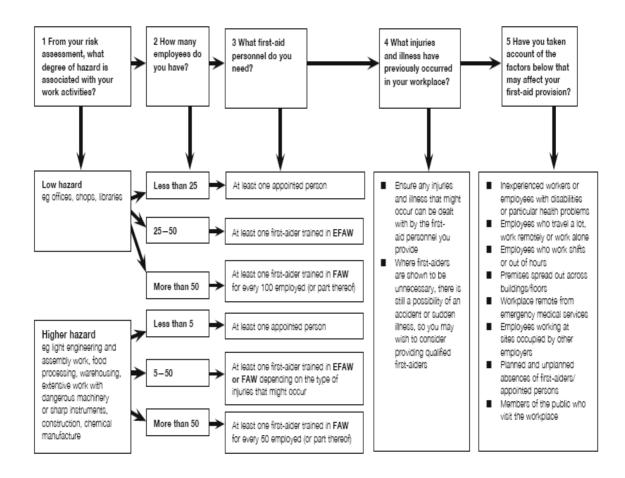

1.1 The following table provides a guide to conducting a risk assessment to determine the number of First Aiders required. When calculating first aid provision, leave periods, location, the expected response times of staff and the Ambulance Service must also be considered. The risk assessment should also take account of any parts of the workplace that have different work activities/hazards which may require different levels of first-aid provision.

Factor to consider	Space for notes	Impact on first-aid				
		provision				
Hazards						
Does your workplace have low-level hazards such as those that might be found in offices and shops?		The minimum provision is: - an appointed person to take charge of first-aid arrangements; - a suitably stocked first-aid box.				
Does your workplace have higher level hazards such as chemicals or dangerous machinery?		You should consider: - providing first-aiders; - additional training for first-aiders to deal with injuries resulting from special				
Do your work activities involve special hazards such as hydrofluoric acid or confined spaces?		hazards; - additional first-aid equipment; - precise siting of first-aid equipment; - providing a first-aid room; - informing the emergency services.				
	Employees	SCIVICCS.				
How many people are employed on site?		Where there are small numbers of employees, the minimum provision is: - an appointed person to take charge of first-aid arrangements; - a suitably stocked first-aid box. Where there are large numbers of employees you should consider providing: - first-aiders; - additional first-aid equipment; - a first-aid room.				
Are there inexperienced workers on site, or employees with disabilities or particular health problems?		You should consider: - additional training for first- aiders; - additional first-aid equipment; - local siting of first-aid equipment. Your first-aid provision should				

	cover any work experience						
Assidants and il	trainees						
Accidents and ill health record							
	T						
What is your record of accidents and ill health?	Ensure your first-aid provision will cater for the type of injuries and illness that might occur in your workplace. Monitor						
What injuries and illness have occurred and where did they happen?	accidents and ill health and review your first-aid provision as appropriate.						
Working arrangements							
Do you have employees who travel a lot, work remotely or work alone?	You should consider: - issuing personal first-aid kits; - issuing personal communicators/mobile phones to employees						
Do any of your employees work shifts or work out of hours?	You should ensure there is adequate first-aid provision at all times people are at work.						
Are the premises spread out, eg are there several buildings on the site or multi-floor buildings?	You should consider provision in each building or on each floor.						
Is your workplace remote from emergency medical services?	You should: - inform the emergency services of your location; consider special arrangements with the emergency services.						
Do any of your employees work at sites occupied by other employers?	You should make arrangements with other site occupiers to ensure adequate provision of first aid. A written agreement between employers is strongly recommended.						
Do you have sufficient provision to cover absences of first-aiders or appointed persons?	You should consider: - what cover is needed for annual leave and other planned absences; - what cover is needed for unplanned and exceptional absences.						
Non-employees							
Do members of the public visit your premises?	Under the Regulations, you have no legal duty to provide first aid for non-employees but HSE strongly recommends that you include them in your first-aid provision.						

Extract from HSE Approved Code of Practise and Guidance – Health and Safety (First Aid) Regulations 1981

1.2. The flow chart below (extract from the HSE ACOP) is a useful tool to check how many first aiders are required whilst people are at work. It can be used to assist in the assessment of First Aid Provision required in Section 3.

GUIDANCE

The above table mentions EFAW (Emergency First Aid at Work) which is an individual who has been trained to a basic level of first aid, but below that of a fully trained First Aider. The MOD does not recommend the use of EFAWs.

2. First Aid Provision for Visitors

2.1 There is no legal requirement under the FAWR to provide first aid for people who are not MOD staff or contractors (but there may be a "duty of care" requirement).

2.2 However, the HSE strongly recommends that expected visitors/members of the public are included in the assessment of first aid provision without diluting the requirements for staff. This will be particularly important when a lot of visitors are expected, such as air shows, open days (including for recruitment purposes, further information is available in The Event Safety Guide (HSG195)) and for wider market initiatives.

February 2012 Leaflet 27 Amd 3 Page 15 of 21

Leaflet 27 A Guide to Contents of a First Aid Box

- 1. There is no standard list of items to put in a First- Aid Box. It depends on what you assess the needs to be. However, as a guide, and where there is no special risk in the workplace, a minimum stock of first aid items would be:
 - A leaflet giving general guidance on first aid e.g. <u>HSE leaflet IND(G) 347</u> Basic advice on first aid at work;
 - 20 individually wrapped sterile adhesive dressings (assorted sizes);
 - Two sterile eye pads;
 - Four individually wrapped triangular bandages (preferably sterile);
 - Six safety pins;
 - Six medium sized (approximately 12 cm x 12 cm) individually wrapped sterile unmedicated wound dressings;
 - Two large (approximately 18 cm x 18 cm) sterile individually wrapped unmedicated wound dressings;
 - One pair of disposable gloves.

NOTE: You must not keep tablets, medicines or ointments in the First Aid Box.

1.2 The above is a suggested contents list only; equivalent but different items will be considered acceptable.

Leaflet 27

A Guide for Emergency First Aid for Untrained People

1. Introduction

- 1.1 This Annex to Leaflet 27 contains advice on basic first aid for anyone who is untrained (i.e. the "good Samaritan") to use in an emergency. It is not a substitute for effective training. First aid is a skill requiring training and practice. You should not attempt to give more than this basic first aid if you have not been trained.
- 1.2 When giving first aid, it is vital that you assess the situation, and that you:
 - Take care not to become a casualty yourself
 - Look for anything that may be of danger (e.g. live electricity, gas)
 - While administering first aid use protective clothing and equipment where necessary
 - Deal with unconscious casualties first
 - Send for help immediately, don't delay; then follow the advice given below.

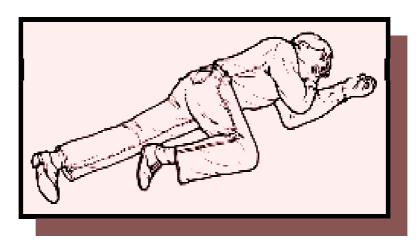

2. What to do in an emergency

- 2.1 Check whether the casualty is conscious by gently shaking and asking loudly if they are alright. If the casualty is unconscious or unresponsive:
 - **SHOUT FOR HELP** (or preferably send someone to get help)
 - If the casualty has stopped breathing, open the airway (normally by tilting the head backwards see diagram). If there is still no breathing and you are competent to give chest compressions, do so (30 compressions followed by 2 rescue breaths then a further 30 compressions).

2.2 Unconsciousness

2.2.1 In most workplaces, expert help should be available fairly quickly. But if you have an unconscious casualty, it is vital that his or her airway is kept clear. If you cannot keep the airway open as described above, you may need to turn the casualty into the recovery position (see diagram). The priority is to establish an open airway.

2.3 Wounds and bleeding

2.3.1 Open wounds should be covered - after washing your hands if possible. Apply a dressing from the First Aid Box over the wound and press firmly on top of it with your hands or fingers. The pad should be tied firmly in place. Raise and support the injured part (unless it appears broken). If bleeding continues, another dressing should be applied on top. Do not remove the original dressing. Seek appropriate help.

2.4 Minor injuries

2.4.1 Minor injuries - of the sort which the injured person would treat themselves at home - can be treated from the contents of the First Aid Box. The casualty should wash his or her hands and apply a dressing to protect the wound and prevent infection. In the workplace, special metallic and/or coloured or waterproof dressings may be supplied according to the circumstances. Wounds should be kept dry and clean.

2.5 Suspected broken bones

2.5.1 If a broken bone is suspected, obtain expert help. Do not move casualties unless they are in a position which exposes them to immediate danger.

2.6 Burns

- 2.6.1 Burns can be serious. If in doubt seek medical help. Cool the part of the body affected with cold water until the pain is relieved. Thorough cooling may take 10 minutes or more, but this must not delay taking the casualty to hospital.
- 2.6.2 Certain chemicals may irritate or damage the skin some seriously. Treat in the same way as for other burns. It is important that irrigation continues, even on the way to the hospital if necessary (a minimum of 20 minutes is recommended for chemical burns). Remove any contaminated clothing which is not stuck to the skin. Make sure that you avoid contaminating yourself with the chemical.

2.7 Eye injuries

- 2.7.1 All eye injuries are potentially serious. The casualty will be experiencing intense pain in the affected eye, with spasm of the eye lids. Before attempting to treat, wash your hands.
 - If there is something in the eye, irrigate the eye with clean, cool water or sterile fluid from a sealed container, to remove loose material. Do not attempt to remove anything that is embedded.
 - If chemicals are involved, flush the open eye with water or sterile fluid for at least 10-15 minutes. Apply an eye pad and send the casualty to hospital.

2.8 Special hazards

2.8.1 Electrical and gassing accidents can occur in the workplace. You must assess the danger to yourself and not attempt assistance until you are sure it is safe to do so. Call for help (or preferably send someone to get help).

2.8.2 If the casualty has stopped breathing and you are competent to give artificial ventilation and cardiac resuscitation, do so.

2.9 Illness

- 2.9.1 Many everyday ailments can arise at work. Giving medicines is not within the scope of first aid at work. Application of common sense and reassurance to the casualty is the most valuable help that you can give. If in any doubt about the seriousness of the condition, expert help should be sought. If the casualty has his or her own pain relief tablets, they may take these as appropriate.
- 2.9.2 People assisting should not offer medication of their own or belonging to others. Be vigilant for individuals wearing bracelets or necklaces which may indicate a possible reason for illness.
