Guide to the Small Area Estimation CSV files

(Abbreviations:

MC = Multiple Choice component,

SS = Spreadsheet Component

WP = Word Processing Component)

The CSV files contain the same data as the excel files. However, please note in the excel data files all proportion estimates (mean and CI estimates) have been rounded to three decimal places (and are formatted to show one decimal place) and all count estimates (mean and CI estimates) have been rounded to two decimal places (and are formatted to show whole numbers). In CSV data files, the proportion and count estimates are rounded in the same way but both are formatted to show two decimal places. The mean proportion estimates may not always sum to 100% due to rounding.
